Read the two together. A red weekly Δ with a NORMAL today is a real slide. A green week with a BELOW BAND today is one bad day, not a dying ad, and killing it would be a mistake.

The five fatigue tests · this is the whole rulebook

1. **frequency over 3.0**	the same people are seeing it again
2. **outbound CTR down over 15%**	they are reacting to it less than they did
3. **CPM up over 15%**	the auction is charging more to keep showing it
4. **hook rate down over 15%**	the first 3 seconds stopped stopping them
5. **CPP up over 20%**	each purchase now costs more than it did

FATIGUED = 3 or more of the five fire and frequency is over 3.0, OR frequency is over 4.0 with 2 firing. **SATURATED** = frequency over 4.0 on its own: the same people are seeing it again whatever else is true. **FATIGUING** = 2 fire. **FRESH** = 1 or none. A catalogue ad has no hook, so only four of the five can ever fire on it.

Creative — what to make next

How many you launched, how many won, the criteria, the winners by name, and what is burning out.

Daily memo. Yesterday vs the day before. One day is noisy, treat it as a signal, not a verdict.

Audience is Meta's own breakdown by audience segment.

General observations

The account in plain sentences, with the money attached to each one.

General observations

what a media buyer would say out loud after reading the rest

The move was REAL PERFORMANCE. Revenue +33.6k EGP: +9,108 of it is the budget you set, +24.5k is the account itself. Efficiency improved (ROAS 1.92x to 5.09x).

No ad is fatigued or saturated. Nothing in the account is being shown to the same people over and over, so frequency is not what is holding you back.

Biggest opportunity: PM Robes Oct26 V1 Edit Video 9x16 …. It returns 15.50x against the account's 4.38x at frequency 1.18. Take it from 90 to 104 a day: that is 14 more spend for about 210 more revenue a day.

Margin and LTV are unknown from ad data. Nothing above assumes them.
