Read the two together. A red weekly Δ with a NORMAL today is a real slide. A green week with a BELOW BAND today is one bad day, not a dying ad, and killing it would be a mistake.

The five fatigue tests · this is the whole rulebook

1. frequency over 3.0	the same people are seeing it again
2. outbound CTR down over 15%	they are reacting to it less than they did
3. CPM up over 15%	the auction is charging more to keep showing it
4. hook rate down over 15%	the first 3 seconds stopped stopping them
5. CPP up over 20%	each purchase now costs more than it did

= 3 or more of the five fire and FATIGUED frequency is over 3.0, OR frequency is over 4.0 with 2 firing.

= frequency over 4.0 on its own: the same people are seeing it again whatever else is true.

= 2 fire. FATIGUING

= 1 or none. A catalogue ad has no hook, so only four of the five can ever fire on it.

General observations

The account in plain sentences, with the money attached to each one.

General observations

what a media buyer would say out loud after reading the rest

The move was the BUDGET. Revenue -7,875 EGP: -12.7k of it is the budget you set, +4,791 is the account itself. Efficiency improved (ROAS 1.66x to 3.90x).

No ad is fatigued or saturated. Nothing in the account is being shown to the same people over and over, so frequency is not what is holding you back.

Biggest opportunity: Big personality catalogue 06-28. It returns 4.40x against the account's 2.51x at frequency 1.97. Take it from 492 to 591 a day: that is 98 more spend for about 433 more revenue a day.

The money is in the wrong audience. Existing customers returns 7.07x but only takes 8% of spend, while New audience returns 3.03x on 57% of it. Move budget from the second to the first.

Margin and LTV are unknown from ad data. Nothing above assumes them.
