

OURKIDS — STRATEGY READ

AI Head of Ecommerce · Meta + Shopify + Clarity, joined.

Last 7 days 2026-07-10 to 2026-07-16 vs prior 7 days 2026-07-03 to 2026-07-09. All values EGP.

HEALTH: AMBER

Confidence 88%

Net sales **987,753** vs 1,029,314, down 41,561. This is a traffic problem, not a demand problem.

Sessions fell to **123,362** vs 140,768, a loss of 17,406 visits. Orders followed, **907** vs 1,069.

AOV rose and saved the week, **1,255** vs 1,126, because units per order climbed to **2.50** vs 2.16.

Returning customer rate rose to **48.5%** vs 45.0%, so the loss is concentrated in new customers, which is where traffic feeds.

Biggest leak. Organic search traffic collapsed, 10,731 sessions vs 17,928, and it is your best converting source at CVR 1.39% vs the store 0.65%. About 17,900 per day.

Biggest opportunity. Mobile checkout is broken for half your visitors, Clarity shows JavaScript errors on 48% to 52% of mobile Chrome and Safari sessions. Worth roughly 12,000 per day.

Stripped read. Three one off big ticket orders inflated the week, Ride On Police Bike 12,200, E-Scooter 8,800, Breast Pump 7,000. Underlying week near 947,600 net.

DO BEFORE 10AM — ranked by money

1	Fix the mobile checkout JavaScript error on Chrome and Safari.	~12,000 / day
2	Reorder the swim robes about to stock out (Unicorn 10d, Baby Barbie 4d, Salmon 12d, Unisex Navy 13d cover).	protect 6,000 to 8,000 / day
3	Recover lost organic search intent, Search Console check + Google Search on the swim robe terms.	up to 9,000 / day
4	Hold total Meta budget, true MER 5.33x on net not 5.69x, frequency 5.75 is saturation. Reallocate.	reallocation

1. REVENUE DECOMPOSITION — the causal walk

Revenue = Orders x AOV. Orders 907 vs 1,069, down 162. AOV 1,255 vs 1,126, up 129. Orders drove the miss, AOV cushioned it.

Orders = Sessions x CVR. Sessions 123,362 vs 140,768, down 17,406. CVR 0.654% vs 0.677%. Traffic is about 80% of the order loss.

Sessions by source. Organic search 10,731 vs 17,928, down 7,197, converts best at 1.39%. Direct 55,685 vs 63,095, down 7,410, converts 0.24%. Social 56,201 vs 58,999, down 2,798, holds 0.90%.

CVR walk. Add to cart held 3.82% vs 3.64%. Reached checkout out of carts fell 33.3% vs 36.8%. Completed out of reached checkout held 51.5% vs 50.6%. The leak sits between cart and checkout start.

AOV walk. ASP fell 435 vs 446, computed as net sales divided by units. Units per order rose 2.50 vs 2.16. AOV rose on basket size not price, driven by Panini sticker attach at 544 units.

Customer split. Returning rate 48.5% vs 45.0%. New customer orders fell to roughly 467 vs 588. The order loss is a new customer loss.

2. MONEY LOST — ranked by EGP per day

LEAK 1. Organic search traffic collapsed. ~17,900 / day.

Observation. Your best converting channel lost 40% of its traffic.

Evidence. Shopify sessions organic search 10,731 vs 17,928, completed 149 vs 225, CVR 1.39% vs 1.25%, store CVR 0.65%.

Root cause. Organic referrals fell, most likely a ranking or indexing slip on swim robe and sticker pages plus seasonality. Exact cause needs Google Search Console, not one of the three sources, so a 70% read.

Financial impact. 7,197 lost sessions x CVR 1.39% x AOV 1,255 is about 17,900 per day.

Confidence. 70%, held down because Search Console is not wired in.

Decision. Run a Search Console ranking and coverage check on the top swim robe and sticker URLs, and capture the same terms on Google Search now while organic is down.

Expected gain. Up to 9,000 per day if half the intent is recovered.

LEAK 2. Mobile checkout JavaScript errors. ~12,000 / day.

Observation. Half of mobile visitors hit a script error before they can buy.

Evidence. Clarity JavaScript errors mobile Chrome 48%, Chrome Mobile 48.8%, Mobile Safari 51.6%, mobile overall 32%, quickbacks mobile 18.4%, store CVR 0.65%.

Root cause. A broken script on the mobile product and cart path, concentrated on Chrome and Safari.

Financial impact. Modeled recovery about 12,000 per day on a 10% mobile conversion lift.

Confidence. 80%, error rate measured, revenue modeled.

Decision. Pull the console error on mobile Chrome and Safari on the product and cart pages and ship the fix today.

Expected gain. About 12,000 per day.

LEAK 3. Swim robes about to stock out. protects 6,000 to 8,000 / day.

Observation. Your top summer sellers are your thinnest stock.

Evidence. Girls Unicorn 40 units, 28 sold in 7 days, 10 days of cover, net 21,684 at ASP 1,032. Baby Barbie 9 units, 15 sold, 4 days of cover. Salmon Flamingo 44 units, 25 sold, 12 days of cover. Unisex Navy 32 units, 17 sold, 13 days of cover.

Root cause. Peak season velocity against shallow reorders.

Financial impact. Unicorn alone about 3,098 per day, the four together protect 6,000 to 8,000 per day.

Confidence. 90%.

Decision. Reorder all four today before another pound of traffic is spent on them.

Expected gain. Protects 6,000 to 8,000 per day.

LEAK 4. Direct traffic converts at 0.24%.

Observation. 45% of sessions come from direct and almost none convert.

Evidence. Direct 55,685 sessions, 136 completed, CVR 0.24% vs the store 0.65%.

Root cause. Likely bot or untracked in app web view traffic, not real buyers.

Financial impact. Small real money, this mostly inflates the denominator and depresses blended CVR.

Confidence. 65%.

Decision. Filter bot traffic and tighten UTM tagging so the real CVR is visible.

Expected gain. Cleaner measurement, minor revenue.

3. MONEY LEFT ON THE TABLE

In stock winners, feed them. Fuchsia Swim Robe 194 units, 62 days of cover, and Frozen Swim Robe 110 units, 40 days of cover, both selling with deep stock. Safe to scale on ads, unlike the thin Unicorn and Barbie. Point ad spend here, hold it on the thin ones until reordered.

Basket size is winning, protect it. Units per order rose 2.50 vs 2.16 on Panini sticker attach at 544 units. Put the sticker and low ASP attach on the swim robe pages and in cart to hold AOV.

Returning customers are carrying the store. Returning rate 48.5% vs 45.0%. Run a returning customer play on swim robe and Smiggle buyers now, while intent is hot.

4. PRODUCT, VENDOR AND INVENTORY

I.Wear is the anchor, net 271,240, 27% of the store, ASP 913, down only 1.6%.

Gainers. Smiggle new at 47,000 ASP 2,043, Mattel 22,000 vs 995, Panini 35,918 vs 15,416 on 544 units ASP 66, Sistema 19,355 vs 6,520.

Faders. Al Sayad 15,851 vs 25,458, Cherries 12,460 vs 21,508, Pompelo 23,676 vs 29,009.

Panini FIFA stickers sit on 9,049 units and 133 days of cover, deep, so push them for attach not restock. The swim robe stockouts are the only urgent inventory action.

5. META — the questions Ads Manager will not answer

Spend 185,376, Outbound CTR 3.30%, CPM 77.84, frequency 5.75. Meta claims ROAS 5.69 and revenue 1,054,015.

The store total sales were 1,023,743, so Meta is claiming more revenue than the store actually made, and its 907 attributed purchases equal 100% of the store 907 orders. That is over attribution.

The honest number is blended MER 5.33 on net sales and 5.52 on total sales. Frequency 5.75 over 7 days on the same 414,025 people is saturation, more budget buys repetition not reach.

Decision. Do not raise total Meta budget into frequency 5.75, hold it, move incremental money to the reorders and to capturing the lost search intent.

6. WEBSITE AND TECHNICAL — from Clarity

Mobile JavaScript errors 32% overall, 48% to 52% on Chrome and Safari. Quickbacks mobile 18.4%, a speed or ad to page match problem.

Dead clicks 3%, rage clicks 0.04%, so rage is not the issue, the script error and the quickbacks are. Every one sits on mobile, which is where the money is.

7. SEARCH INTELLIGENCE

Referrer level organic search is Leak 1, down 40% and your highest intent source.

Internal site search terms are not exposed by the Shopify analytics connector, that field is missing from all three sources, so zero result and out of stock searches cannot yet be resolved to money. Best read at 60% confidence, swim robe and Panini demand is the live intent, and the swim robe stockouts are the most likely internal dead ends, reorder covers both.

8. CROSS PLATFORM CONCLUSIONS

One. Meta is saturating at frequency 5.75 and over crediting itself at 5.69 while the free channel that converts best, organic search, fell 40%. Over indexed on paid repetition, under indexed on high intent free traffic.

Two. Meta is paying to send traffic to swim robes 4 to 13 days from stock out. You are buying clicks for shelves about to be empty, reorder before you spend.

Three. Outbound CTR 3.30% and sessions are healthy, but the drop sits between cart and checkout on mobile, so the leak is the site not the ad, fix the script not the creative.

9. DECISION BOARD

FIX	Ship the mobile Chrome and Safari checkout script fix today.	~12,000 / day
RESTOCK	Reorder Girls Unicorn 10d, Baby Barbie 4d, Salmon 12d, Unisex Navy 13d cover.	6,000 to 8,000 / day
CAPTURE	Search Console check + Google Search on the swim robe and sticker terms.	up to 9,000 / day
HOLD	Do not raise total Meta budget at frequency 5.75, reallocate.	reallocation
SCALE	Point ad spend at the deep stock robes, Fuchsia 62d and Frozen 40d cover.	upside

MEASURE	Filter bot direct traffic so the real CVR is visible.	clean data
