Read the two together. A red weekly Δ with a NORMAL today is a real slide. A green week with a BELOW BAND today is one bad day, not a dying ad, and killing it would be a mistake.

The five fatigue tests · this is the whole rulebook

1. frequency over 3.0	the same people are seeing it again
2. outbound CTR down over 15%	they are reacting to it less than they did
3. CPM up over 15%	the auction is charging more to keep showing it
4. hook rate down over 15%	the first 3 seconds stopped stopping them
5. CPP up over 20%	each purchase now costs more than it did

= 3 or more of the five fire and
FATIGUED frequency is over 3.0, OR frequency is over 4.0 with 2 firing.

= frequency over 4.0 on its own: the
same people are seeing it again
whatever else is true.

= 2
FATIGUING fire.

= 1 or none. A catalogue ad has no
hook, so only four of the five can
ever fire on it.

Creative — what to make next

How many you launched, how many won, the criteria, the winners by name, and what is burning out.

FATIGUED = 3+ of the five tests fire and frequency is over 3.0, or frequency is over 4.0 with 2 firing. **SATURATED** = frequency over 4.0 on its own. **FATIGUING** = 2 fire.

3-day memo. Last 3 days vs the 3 before.

Audience is Meta's own breakdown by audience segment.

General observations

The account in plain sentences, with the money attached to each one.

General observations

what a media buyer would say out loud after reading the rest

The move was **REAL PERFORMANCE**. Revenue +10.5k EGP: +1,368 of it is the budget you set, +9,138 is the account itself. Efficiency improved (ROAS 3.90x to 7.57x).

No ad is fatigued or saturated. Nothing in the account is being shown to the same people over and over, so frequency is not what is holding you back.

The money is in the wrong audience. Engaged returns 11.34x but only takes 34% of spend, while Existing customers returns 3.96x on 7% of it. Move budget from the second to the first.

Margin and LTV are unknown from ad data. Nothing above assumes them.
